Distech Basics for Owner Operators (DBO-1)

Course Overview:

Distech Basics for Owner Operators (DBO-1) is for anyone with little or no experience on a Distech system. This course is taught on a Sunbelt Controls standard database. If your system was not installed by Sunbelt Controls your GUI may look different, but the content is still applicable.

DBO-1 is a one day training course created for end users that want to get more familiar with BMS basics and how they apply to their own Distech system. Students will learn basic navigation, how to create and modify schedules, run reports, understand alarm management, view histories as well as some basic troubleshooting. There will be a focus on common industry terminology, an overview of Distech hardware and some networking fundamentals.

eLearning Format:

You will be taught by a live instructor using Zoom video conferencing. Each student will have remote access to a training database to complete hands-on tasks allowing the same experience that they would have in the classroom. The exercises are designed to prepare students to navigate, modify and troubleshoot their system quickly and efficiently.

This is a collaborative learning environment, so students are encouraged to have web cameras on and participate in class discussions.

Students will need to meet the following requirements:

- Stable internet access
- Audio and video availability through PC or phone (or a web camera for your PC)

For a better learning experience, we recommend:

- A second monitor (one for the Zoom meeting and one for class exercises)
  or an additional laptop or desktop
- Print out your workbook before class for note taking
- Create a quite space for learning while you take this class

Course Content:

History / Terminology	**Histories** (Trends)
BMS Basics	**Networking Basics**
Navigation	**Reports** (Sunbelt Standard)
User Management	**Controls Drawings** (Sunbelt Standard)
Hardware Basics	**Alarm Management**
Schedules	**Troubleshooting Basics**

DBO-1 can also be deployed at your site.
